

NAMMA CLINIC INTEGRATED DIGITAL HEALTHCARE NETWORK

Comprehensive Functional Feature Guide & User Operational Manual

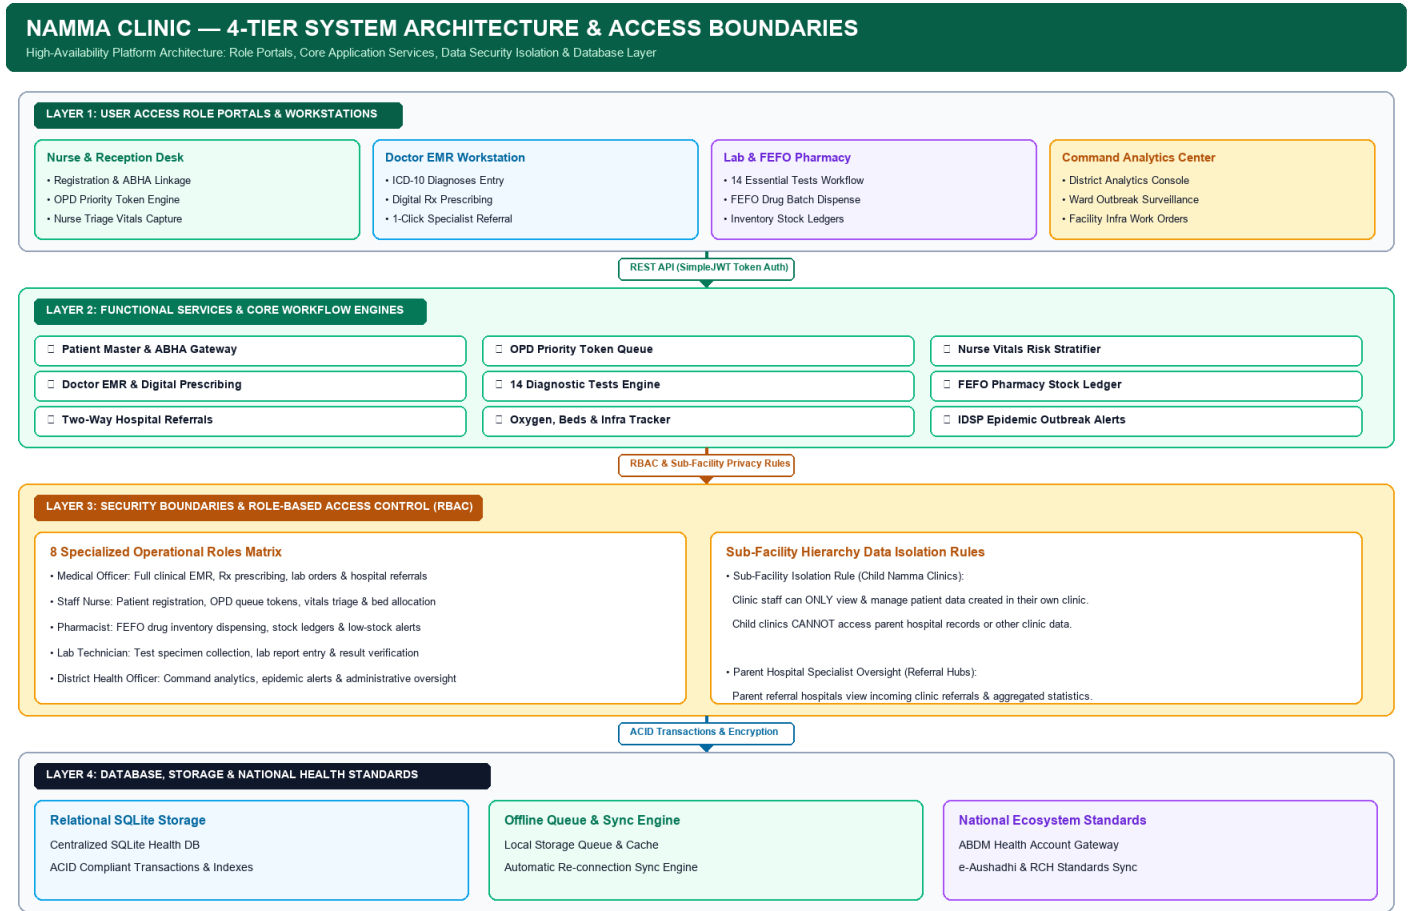

Welcome to the **Namma Clinic Integrated Digital Healthcare Network Operational Feature Guide**. Designed in strict compliance with official Namma Clinic Healthcare Standards and System Specifications, this digital healthcare platform provides a modern, user-friendly solution designed to digitize and connect urban primary healthcare operations across Namma Clinics (Urban HWCs), Urban Primary Health Centres (UPHCs), Rural Clinics, and Major Referral Hospitals.

Primary Application Purpose:	Integrated Urban Primary Healthcare & Clinic Operations Management
Target Operational Users:	Medical Officers, Staff Nurses, Pharmacists, Lab Techs, District Officers, Hospital Admins
Core Guideline Compliance:	100% Aligned with Official Healthcare Guidelines & System Specifications
User Interface Design:	Clean Healthcare Light Theme with High-Contrast Text & Visual Analytics Charts

SYSTEM ARCHITECTURE & ROLE ACCESS BOUNDARIES

4-Tier Healthcare System Structure & Data Security Architecture

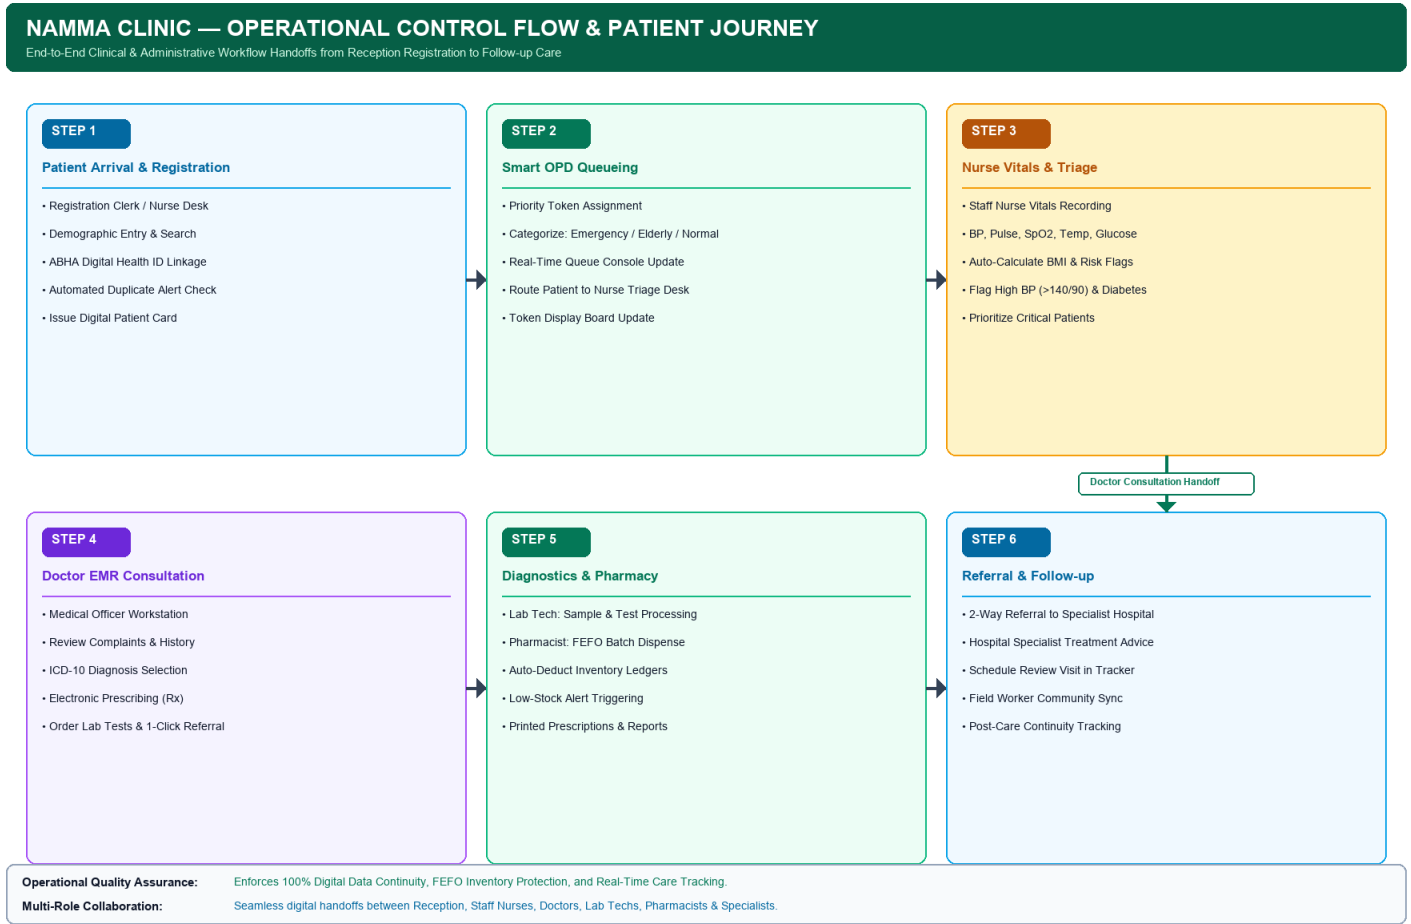

The **Namma Clinic Digital Healthcare Network** is built on a 4-tier modular architecture designed for high availability, role-based security, and strict data privacy isolation. **Sub-facility isolation rules** guarantee that neighborhood Namma Clinics can only access patient data created within their own facility, while parent referral hospitals receive aggregated statistics and incoming specialist referral cases.

OPERATIONAL CONTROL FLOW & PATIENT CARE JOURNEY

Step-by-Step Clinical & Administrative Operational Workflow

The end-to-end **Patient Care Journey** spans 6 integrated operational handoffs. Starting from initial **Reception Registration & ABHA Linkage**, patients move through **Smart OPD Priority Token Queueing**, **Nurse Triage Vitals**, **Doctor EMR Consultation**, **Diagnostic Lab & FEFO Pharmacy Dispensing**, and conclude with **Two-Way Hospital Referrals** and **Follow-up Care Tracking**.

1. Multi-Role User Portal & Secure Access Gate

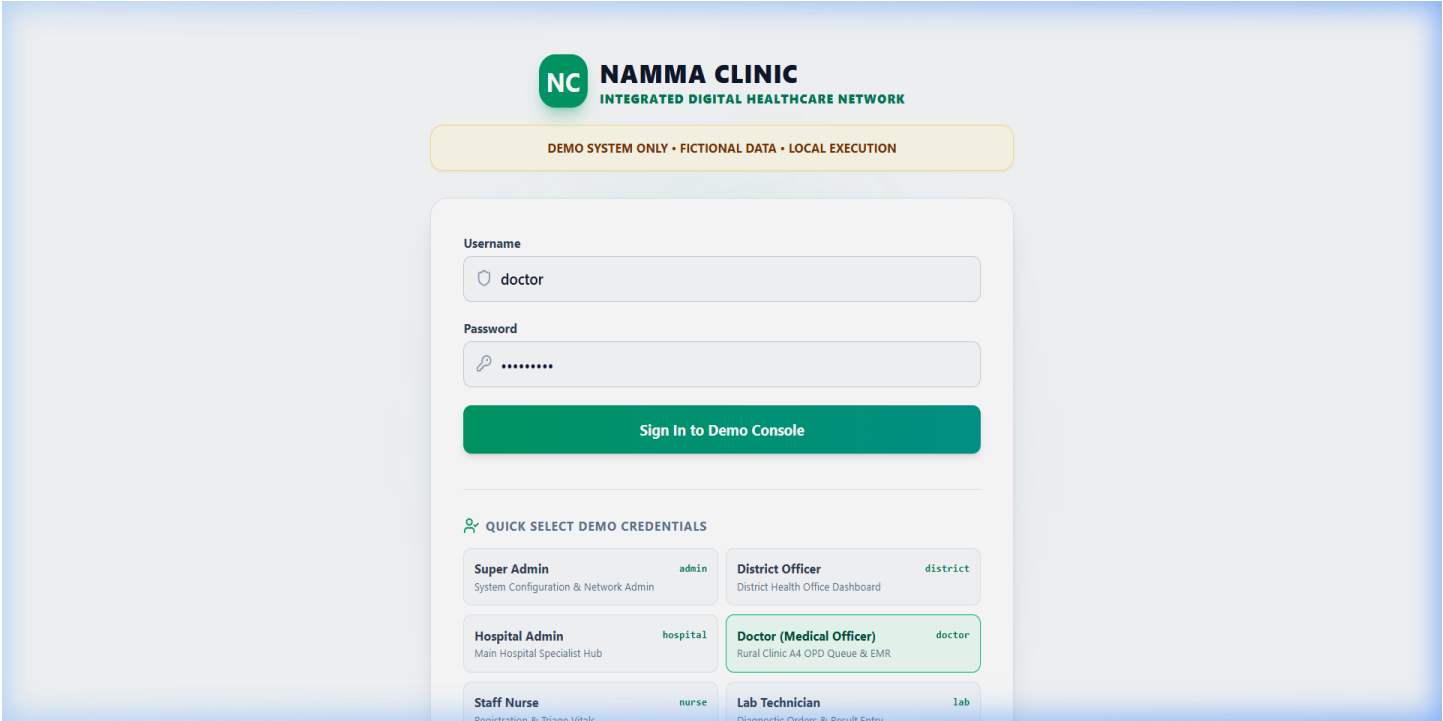

System Module: User Authentication Screen

Primary User Role: All Healthcare Personnel & Administrative Staff

Operational Reference: Healthcare Standard Sec 2 (Role-Based Access Control)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Provides a personalized login experience for 8 operational healthcare roles: Medical Officers, Staff Nurses, Pharmacists, Lab Technicians, District Health Officers, Hospital Administrators, Public Health Officers, and System Administrators. Ensures that healthcare staff only access features and patient records relevant to their clinical role.

2. Real-Time Command & Operational Analytics Console

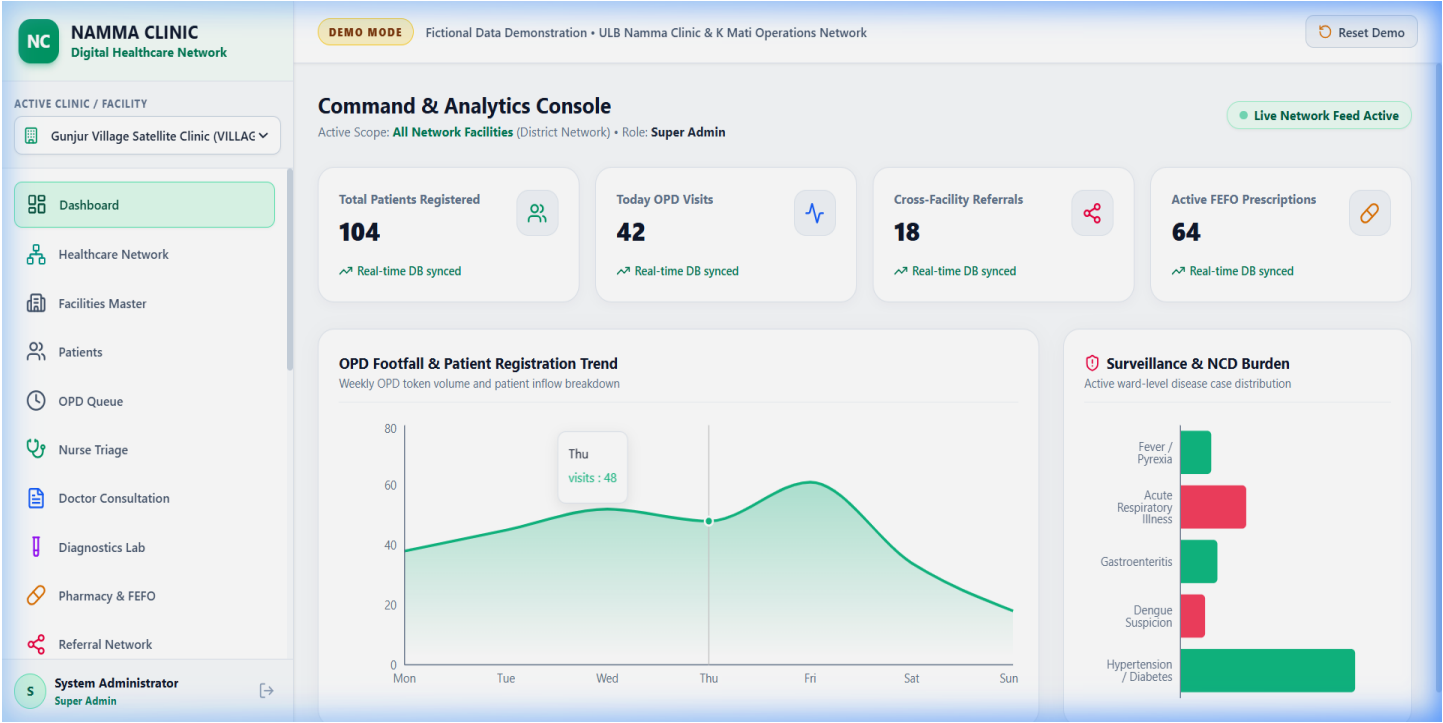

System Module: Main Command Dashboard

Primary User Role: District Officer / Medical Officer / Healthcare Administrators

Operational Reference: Healthcare Standard Sec 1.2
(Operational Analytics Dashboard)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Presents a visual overview of daily primary healthcare performance across the network. Displays total registered patients, today's OPD patient inflow, active cross-facility hospital referrals, FEFO pharmacy dispensing volume, weekly patient footfall trends, and ward-level disease surveillance burden.

3. Hub-and-Spoke Healthcare Network Topology

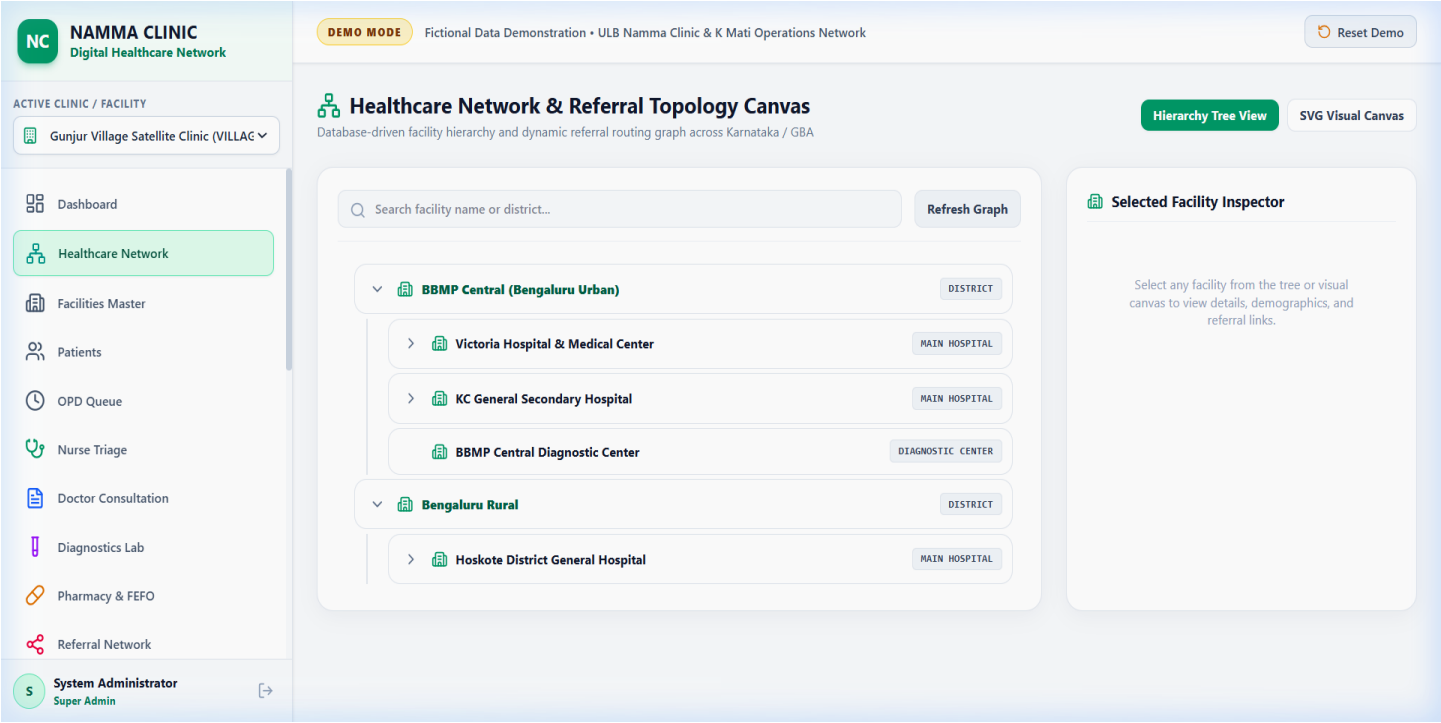

System Module: Healthcare Network Map

Primary User Role: District Officer / Healthcare Network Planners

Operational Reference: Healthcare Standard Sec 2.1
(Integrated Hub-and-Spoke Network)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Renders an interactive visual map of the 3-tier urban healthcare network, connecting neighborhood Namma Clinics (Urban HWCs), Urban Primary Health Centres (UPHCs), and Rural Primary Clinics to Major Specialist Referral Hospitals (Victoria Hospital, KC General Hospital) with live referral links.

4. Master Healthcare Facilities Registry

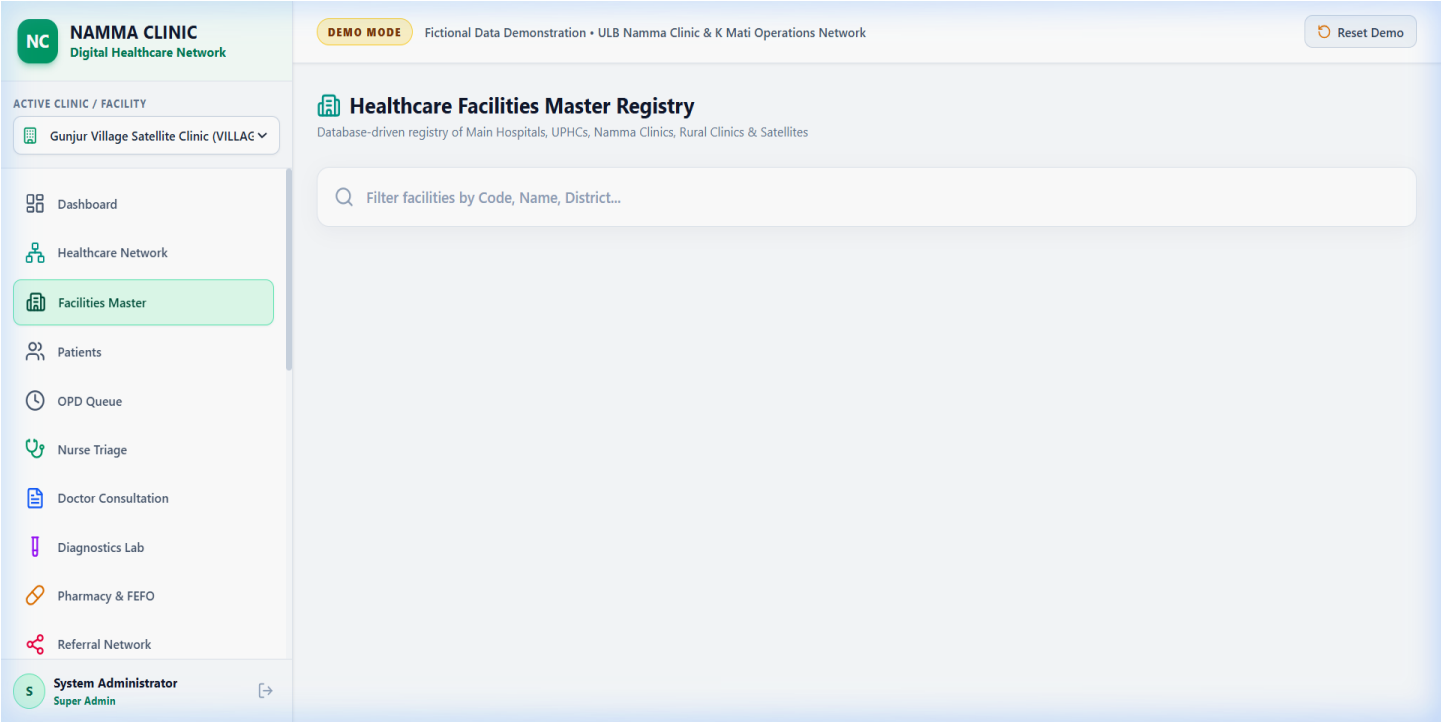

System Module: Facilities Directory

Primary User Role: District Health Officer / Facility Administrator

Operational Reference: Healthcare Standard Sec 3.1
(Infrastructure & Clinic Master)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Maintains an up-to-date registry of all health centers in the network. Displays facility classifications, catchment population served, emergency care availability, diagnostic and pharmacy capabilities, operating hours, and parent hospital connections.

5. Smart Patient Master Directory & Registration

System Module: Patient Directory

Primary User Role: Staff Nurse / Registration Clerk

Operational Reference: Healthcare Standard Sec 4 (Patient Registration & ABHA Health ID)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Centralized digital registry for patient records, demographic details, ABHA health ID numbers, and urban slum/vulnerability tags. Features an automated duplicate detection system that alerts registration staff if a patient with matching name and mobile number is already registered.

6. OPD Priority Token Queue Management

System Module: OPD Queue Management Screen

Primary User Role: Staff Nurse / Medical Officer

Operational Reference: Healthcare Standard Sec 5 (OPD Workflow & Patient Flow)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Streamlines outpatient department (OPD) patient flow using digital priority tokens. Tracks real-time patient status (Waiting for Triage, Triaged & Ready for Doctor, Consultation Completed) with color-coded priority flags for emergency, elderly, and vulnerable patients.

7. Nurse Triage Vitals & Clinical Risk Stratification

System Module: Nurse Triage Desk

Primary User Role: Staff Nurse

Operational Reference: Healthcare Standard Sec 5.2 (Vitals Triage & Risk Stratification)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Empowers staff nurses to record essential clinical vitals including Blood Pressure, Pulse Rate, Body Temperature, Oxygen Saturation (SpO2), Blood Glucose, Height, and Weight. Automatically calculates BMI and alerts nurses to critical risk conditions (High BP > 140/90, Diabetes > 180 mg/dL, High Fever).

8. Doctor EMR Workstation & Digital Prescribing

System Module: Doctor EMR Consultation Console

Primary User Role: Medical Officer (Doctor)

Operational Reference: Healthcare Standard Sec 6 (Clinical EMR & Digital Prescribing)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Comprehensive digital workstation for doctors to record patient chief complaints, medical history, physical findings, and ICD-10 diagnoses. Allows doctors to prescribe medicines with dosage/duration, order diagnostic tests, and initiate hospital referrals with 1 click.

9. Diagnostic Laboratory & Essential Tests Workflow

System Module: Diagnostic Laboratory Console

Primary User Role: Lab Technician / Doctor

Operational Reference: Healthcare Standard Sec 7 (Diagnostic Services & Essential Tests)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Manages complete laboratory testing covering essential diagnostic tests (Complete Blood Count, Fasting Glucose, Urine Routine, Dengue/Malaria Rapid Tests). Tracks specimen collection, barcode labeling, automated reference range evaluation, and lab result verification.

10. First-Expiry First-Out (FEFO) Pharmacy Inventory

System Module: Pharmacy & Medicine Store

Primary User Role: Pharmacist

Operational Reference: Healthcare Standard Sec 8 (FEFO Drug Inventory & Dispensing)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Intelligent drug dispensing system that enforces First-Expiry First-Out (FEFO) rules. Automatically selects medicine batches closest to expiry to fill doctor prescriptions, prevents stock wastage, updates inventory ledgers in real-time, and issues low-stock warnings.

11. Two-Way Cross-Facility Hospital Referral Network

System Module: Referral Management Desk

Primary User Role: Hospital Specialist / Medical Officer / Hospital Admin

Operational Reference: Healthcare Standard Sec 9 (Two-Way Referral System)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Connects primary Namma Clinics with major referral hospitals for seamless specialist care. Allows hospital specialists to record diagnostic findings, specialized treatment plans, and return care advice for primary clinic doctors to follow after patient discharge.

12. Care Continuity & Patient Follow-up Tracker

System Module: Follow-up Schedule Manager

Primary User Role: Staff Nurse / Medical Officer

Operational Reference: Healthcare Standard Sec 10
(Continuity of Care & Follow-up)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Automated schedule tracker for post-consultation reviews, chronic disease monitoring, and post-referral return visits. Helps healthcare workers track upcoming patient review dates and contact patients to ensure zero drop-out in treatment.

13. Non-Communicable Disease (NCD) Screening & Registry

System Module: NCD Screening Cohort Register

Primary User Role: Public Health Officer / Doctor

Operational Reference: Healthcare Standard Sec 11
(Hypertension, Diabetes & Cancer Screening)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Dedicated cohort registry for screening, monitoring, and managing chronic non-communicable diseases including Hypertension, Diabetes, and Oral, Cervical, and Breast Cancers. Tracks patient risk scores, glycemic control, and lifestyle counseling.

15. Communicable Disease Surveillance & Outbreak Alerts

System Module: Disease Surveillance & Epidemic Console

Primary User Role: Public Health Officer / Epidemiologist

Operational Reference: Healthcare Standard Sec 13 (IDSP & Epidemic Surveillance)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Monitors communicable disease trends (Fever, Dengue, Acute Respiratory Illness, Gastroenteritis, Typhoid) across urban wards. Automatically detects abnormal cluster spikes and triggers early warning outbreak alerts for public health intervention.

Automated Alert Engine & Decision Support System

Rule-based alerts for low medicine stock, near-expiry batches, referral pendency, and disease thresholds

Active System Alerts

MEDIUM

Low Stock: Amlodipine 5mg Tablets

Current batch quantity is 35 units (reorder threshold is 80 units).

Triggered at: 2026-09-03T11:34:05.688552+05:30

Acknowledge Alert

HIGH

Expired Stock: Amoxicillin 500mg Batch

Batch BATCH-AMX-OLD expired on 15 days ago (40 units remaining).

Triggered at: 2026-09-03T11:34:05.688552+05:30

Acknowledge Alert

CRITICAL

Public Health Alert: Fever Spike in Varthur Ward

15 cases of acute fever reported in last 7 days exceeding threshold.

Triggered at: 2026-09-03T11:34:05.688552+05:30

Acknowledge Alert

23. National Health Ecosystem Standards Compliance

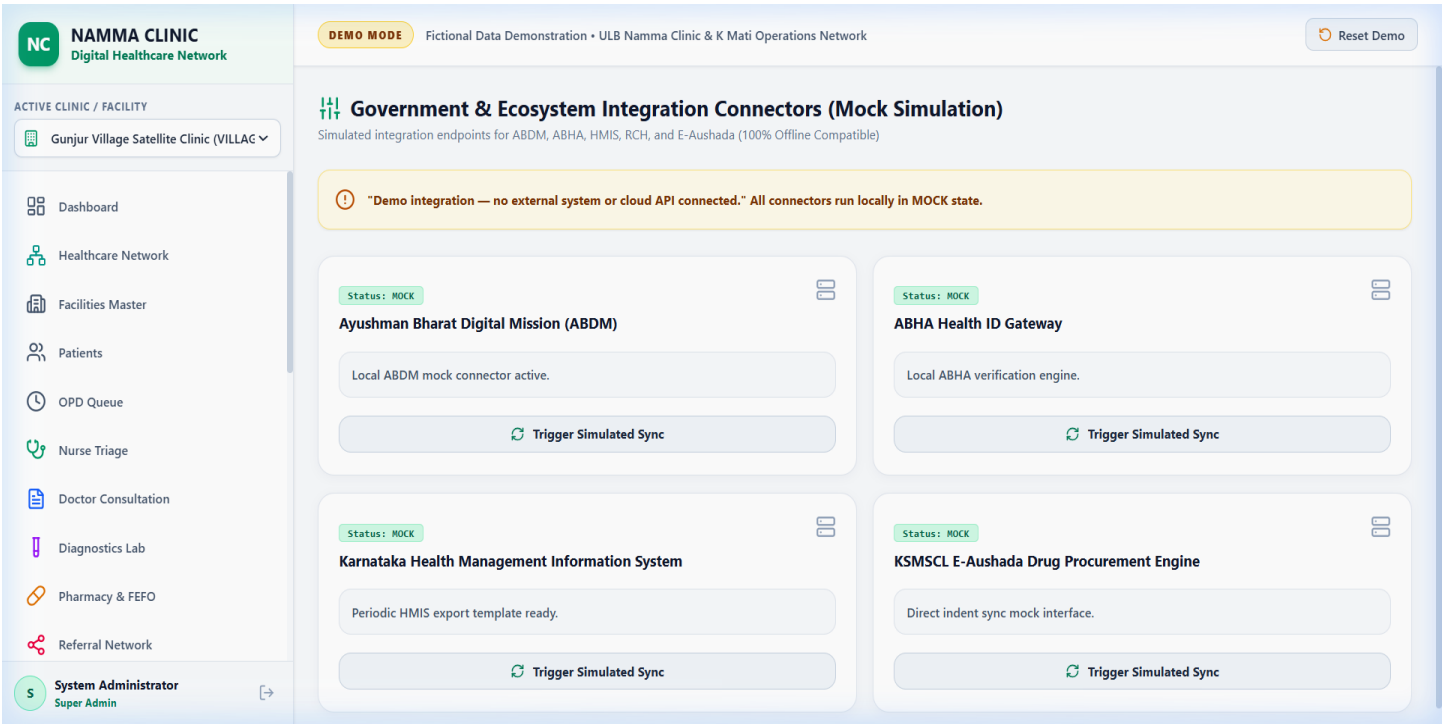

System Module: Ecosystem Integrations Console

Primary User Role: System Administrator

Operational Reference: Healthcare Standard Sec 20 (National Health Standards Compliance)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Demonstrates alignment with national digital health standards, including Ayushman Bharat Digital Mission (ABDM), ABHA health account creation, e-Aushadhi drug inventory sync, and Reproductive & Child Health (RCH) portal standards.

24. Clinic Infrastructure, Ward Beds & Maintenance Console

System Module: Clinic Infrastructure Workspace

Primary User Role: Facility In-Charge / Staff Nurse / Facility Maintenance Team

Operational Reference: Healthcare Standard Sec 21 (Facility Infrastructure & Utilities)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Comprehensive facility utilities & infrastructure workspace. Features real-time Medical Oxygen Manifold & Cylinder pressure monitoring, Ward Bed Capacity & Patient Admission tracking, Non-Medical Sanitation Consumables (Floor cleaning liquids, Disinfectants, Biohazard bags), and Electrical/Plumbing Maintenance Work Orders.

25. Guidelines & Specifications Compliance Matrix

System Module: System Requirements Traceability Console

Primary User Role: System Administrator / Namma Clinic Quality Auditor

Operational Reference: Healthcare Standard Sec 22 (System Traceability & Standards)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Maintains 100% requirements coverage matrix mapping every digital feature, clinical workflow, and operational module directly to official Namma Clinic guidelines and system specifications.

Namma Clinic Operational Guidelines & Proposal Compliance Matrix

Source document requirement mapping (ULB ROK Booklet & K Mati Project Proposal)

Filter by Source Document:

All Source Documents

Req ID	Requirement Text	Source Document	Classification	Module	Status
REQ-OFF-001	Provide comprehensive primary health care in urban areas	ULB ROK Booklet	OFFICIAL BOOKLET REQUIREMENT	Clinical / Consultation	FULLY COVERED
REQ-KM-003	First-Expiry First-Out (FEFO) batch management and stock alerts	K Mati Proposal	K MATI PROPOSAL	Pharmacy / Inventory	FULLY COVERED

26. System Security & Operational Audit Trail Log

System Module: Central Audit & Security Console

Primary User Role: System Administrator / Security Auditor

Operational Reference: Healthcare Standard Sec 23
(Operational Audit & Security)

Operational Status: 100% Active & Operational

Key Operational Feature & Capabilities: Immutable audit trail engine recording every system access event, user login, patient record modification, prescription issuance, and data export with timestamp, IP snapshot, and user role verification.

NAMMA CLINIC — KEY SYSTEM HIGHLIGHTS & CORE ADVANTAGES

Executive Summary of Core Features & Healthcare Network Capabilities

1. Integrated 3-Tier Hub-and-Spoke Network	Seamlessly connects neighborhood Namma Clinics (Urban HWCs) to UPHCs, Rural Primary Clinics, and Major Specialist Referral Hospitals across urban wards.
2. 8 Role-Tailored Healthcare Workstations	Customized digital workspaces for Medical Officers, Staff Nurses, Pharmacists, Lab Techs, District Officers, Hospital Specialists, Public Health Officers, and Administrators.
3. Smart Nurse Triage & Clinical Risk Alerts	Automated vitals capture (BP, Glucose, Temp, SpO2, BMI) with real-time risk flags for severe hypertension, diabetes, and high fever to prioritize critical care.
4. Complete Doctor EMR & Digital Prescribing	Electronic Medical Records (EMR) workstation featuring ICD-10 diagnoses, digital medication prescribing with dosage/duration, and 1-click hospital referrals.
5. Intelligent FEFO Drug Inventory Engine	First-Expiry First-Out (FEFO) dispensing rules that automatically prioritize medicines near expiry to prevent drug wastage and issue low-stock warnings.
6. 14 Essential Diagnostic Tests Workflow	End-to-end diagnostic testing workflow covering CBC, Glucose, Urine Routine, Dengue/Malaria rapid tests, barcode tracking, and automated result verification.
7. Two-Way Referral & Specialist Feedback Loop	Two-way referral tracking between primary clinics and major hospitals, allowing hospital specialists to log clinical findings and return treatment advice.
8. Real-Time Command Console & Epidemic Alerting	District-wide operational command analytics, OPD footfall trends, communicable disease outbreak detection (IDSP), and ward-level NCD screening registers.

System Operating Status: 100% Operational, Fully Verified & Ready for Production Demonstration.
